The U.S. housing market enters the second half of 2026 in a state of gradual rebalancing. Inventory is projected to grow 3.6% this year, and most economists describe 2026 as a rebalancing year - a backdrop that continues to support steady demand for short-duration, asset-backed lending as conventional financing options remain constrained for active residential investors.

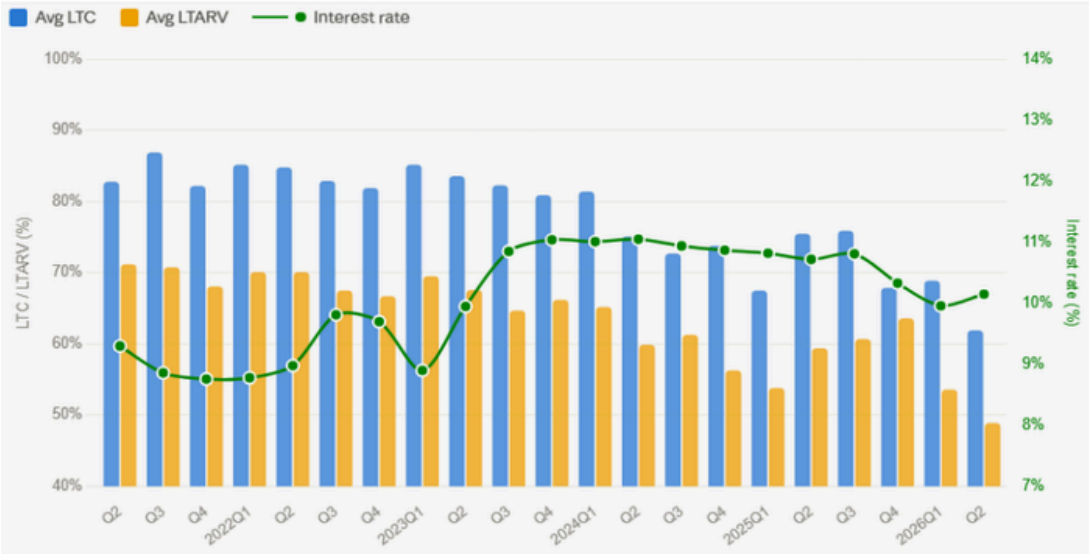

For experienced fix-and-flip operators, the environment remains constructive. Flipping activity rose quarter-over-quarter in 77% of the 174 metro areas analyzed in Q1 2026 by ATTOM. Fix-and-flip margins improved for the first time since mid-2024, and borrower sentiment heading into H2 remains positive. The operators best positioned are those with local market expertise, disciplined underwriting, and access to execution-focused capital, which is the borrower profile New Silver has been built around.
